ASMI FIRDAUS
Power Platform and Dynamics CRM Developer
Hyderabad, India.

asmifirdaus1@gmail.com
+919398454463

Skills

- → DS and Algorithms | Python
- → Dynamics CRM
- → PowerPages | PowerApps | PowerAutomate | Power BI
- → SPFX | PCF
- → HTML | CSS | Javascript | Jquery

Professional Summary

- → Power Platform and Dynamics CRM developer with strong understanding of PowerPages, PowerApps, PowerAutomate, Power BI and Dynamics CRM.
- → Proficient in building basic forms and multistep forms for capturing essential user information.
- → Experience in utilizing form metadata to control field behavior, data validation, and setting field properties within Power Pages forms.
- → Skilled in using Liquid for dynamic content rendering within Power Pages forms.
- → Comfortable with crafting FetchXML queries to retrieve specific data from Dynamics 365 for populating forms or content.
- → Adept at creating reusable content snippets for consistent website design and functionality.
- → Experience in building and customizing Power Pages web pages using HTML and CSS leveraging Bootstrap for responsive web design and user interface components.
- → Skilled in utilizing JavaScript and jQuery for interactive elements and advanced functionalities in web pages.
- → Familiar with managing PowerPages site settings for configuration and customization.
- → Possesses knowledge of integrating Power Pages with SharePoint for data access or document management.
- → Experience in using Dataverse Web APIs to CRUD operations, custom logic implementation, trigger PowerAutomate flows and external system integration.
- → Possesses a strong understanding of table permissions in Power Pages to control data access.
- → Experienced in creating effective filters and views to refine data visibility for different user roles.
- → Adept at building both canvas apps for a user-friendly, low-code experience and model-driven apps for leveraging the power of Common Data Service (CDS) for data management and complex workflows.
- → Deep understanding of Power Fx, the core formula language used within Power Apps for data manipulation, logic control, and user interface customization.
- → Experience in building PowerAutomate flow, with a deep understanding of triggers (events that initiate flows), actions (steps performed within the flow), APIs and conditions (logic branching based on specific criteria) to build complex and efficient automated workflows.
- → Adept at implementing robust error handling mechanisms within Power Automate to ensure smooth workflow execution and efficient troubleshooting.
- → Possesses a strong understanding of data modeling concepts like relationships, hierarchies, and cardinality to create a clean and optimized data model for efficient analysis within Power BI.
- → Skilled in creating visually appealing and informative Power BI reports with a variety of charts, graphs, and other visualizations tailored to specific business insights.
